

# NIKI BOUKOUVALA

## ABOUT ME

I am a multidisciplinary designer, currently based in Athens, Greece. I am passionate about graphic design, visual communication, sustainable design & material engineering. I love experimenting with new materials for crafting in the real world, as well as mastering the design techniques of the digital one.

I am very into research for new and sustainable bio-materials & technologies. While I was studying at the Product & System Design Engineering department of the University of the Aegean, I've been working at fab labs in Athens and Rotterdam practicing both my graphic design and digital fabrication skills through exciting projects focused on new technologies and sustainability. Always excited for collaboration but confident to work on my own, I am always up for challenges to put my creative and problem-solving skills to action.
