Designing products to make it useful, enjoyable and easy to use. My perspective is to tune in to users' needs and business goals, listen, understand the big picture, find creative solutions and iterate. I have a strong aesthetic viewpoint, I care about the small details, I love experimenting with technology and I enjoy constantly acquiring new skills and knowledge. In the last years, I've been working with agile teams, on complex web and mobile applications, as well as B2B SaaS systems, for the Higher Education, e Commerce, Tourism/Hospitality, Logistics and Maritime industries.
